Re: List & Approve bug in ProcureAz UAT Environment

During regression testing of the latest fixes in the UAT environment we have discovered a bug and unfortunately the encountered bug has caused us to cease Regression testing. Until this is rectified be aware -if you use List & Approve to approve documents in the UAT environment you will experience the following (negative) scenario:

- The List and Approve screen will appear and behave as normal when starting the approval process.
 - Choose the documents to approve by clicking the Select box.
 - Select Approve in the Approve Action box and click button Apply Approval Action to Selected.

At this point the List and Approve screen will quickly refresh and the selected documents will no longer be listed on the List & Approve screen. However, if you access the documents you attempted to approve, they will still be in Ready for Approval status.

- The Approval action did not take effect – AND – you will **not** be able to manually approve or take any action on that document as there are no buttons at the bottom of the page (Save & Exit, Cancel Req, and Clone Req).

Again, this problem is ONLY in the UAT environment. ProcureAz TRAIN and ProcureAz PROD do not have this problem.

Please contact the SPO Help Desk if you need any additional information,

Thank you,
